In 14 clues, the letter sequence the wordplay produces omits one letter. Circle all these letters in the grid; then read the topmost circled letter in each column, right to left, and the bottommost circled letter in each column, left to right, to produce a sequence of words. Also, for each such clue, if nth letter of the answer is omitted, circle the nth letter of the clue; these letters, in clue order, will say what to write above each column. Then two items displayed prominently on the page, the text shown in the upper set of shaded letters, the sequence of words you produced earlier, and the text above the grid, will all be examples of things named prominently in the lower set of shaded letters.
