

# 1. Port(ent)land by Ucaoimhu

I was elsewhere when the 1995 Portland convention occurred, so for me that one was only foreshadowing for this one. In this puzzle, each row or column contains two or three entries, one right after the other, and many of these will also involve foreshadowing:

(1) Fifteen answers must be altered before entry by adding (as “foreshadowing”) a copy of the last letter to the start of the word (entries after alteration will include an NI3 word and a first name). Circle (do not shade) all these new first letters in the grid; read left to right and top to bottom, they will tell you what event appropriate to Portland has finally happened.

(2) For twenty other answers, one word in each *clue* must get this same kind of foreshadowing before the clue is solved. Read the added letters in clue order to see a description of me, which also forms a cryptic clue for what you must turn this grid into in (3).

(3) For each clue from (2), if the clue’s *n*th word is the foreshadowed word, shade (do not circle) the *n*th letter of the clue answer in the grid; the result should be two dark paths that overlap slightly. If you take the remaining fifteen clues in clue order, and in each read the *m*th letter where *m* is the answer’s length, you will see what to attach to the overlapping area.

Note: As usual, non-MW answers have been left untagged.
