1. Advance & Wee Tweet
by Ucaoimhu

One change between 2002 and 2015 is that a lot of people now tweet nonstop from their smart phones. In this puzzle, you will get to read tweets (all 1–4.0 characters long, of course) from one woman and five of her thousands of followers. Specifically, every so often, a entry will have a 1–4 letter sequence in a hex that conflicts with the single letter that one or two crossing entries have there; write this sequence (a “tweet”) in that hex, under the conflicting letter. Each tweet will fall into one of these categories:

**Pointers:** Six tweets will each be a one- or two-letter compass direction.

**Flames:** Six tweets will each be a single four-letter word (one such word is a first name).

**Personal revelations:** Ten tweets will each be a three-letter sequence that combines with another in the set of ten to form a last name; treating the conflicting letter (the same in both cases) as a first initial results in the name of a real, well-known person.

(As further assistance, wordplay-only clues for all the four-letter words and six-letter last names can be assembled into the following, otherwise irrelevant sentence: “Knight and Gypsy, having circled rundown cafe, scrambled inward and finally consumed brown-bottled booze, golden well liquor, and a case of beer, complements of the gutless, evil, mean, vile elf — a cold, fantastical creature.”)

Once the grid is filled:

(a) For each clue, if its entry contains one or more tweets, then whenever there is a tweet at the nth hex of the entry circle the nth letter of the clue. If its entry contains no tweets but is adjacent to one or more tweets, then where n is the total number of letters in those tweets, write the nth letter of the clue next to the clue. The unused clues, strung together in clue order, will clue the name of the woman.

(b) Shade each “pointer” hex, plus the next two hexes in the direction indicated, and cross the pointer out. Shade each “flame” hex (if yet unshaded); if its conflicting letter is before “bracket” alphabetically, put brackets around the letter + flame, and if the conflicting letter is after “slash,” put a slash between the letter and the flame.

(c) Each of the five persons from the personal revelations has the same first name as the follower who made the corresponding tweets. Once you figure out who each follower is, calculate the two values described in the circled letters from (a), and write them in the centers of the hexes with the first and last halves of the last name, respectively.

(d) The numbers from (c) will form a complete set of integers, 1–10. Draw lines connecting these in order, 1 to 10, and connect 10 back to 1. You will now see the bygone bit of technology, genericized and made less tweet-like, that is described by the letters written next to the clues in (a), and with which the woman once was, and all her followers could have been, associated.
