

Bolt Construction

by Ucaoimhu

In some grid squares, an Across answer and a Down answer conflict; in each of these, you can resolve the conflict by substituting a new letter, forming new words in both directions (one of these is a poet's last name). These substitutions form two sets; for each set, the Across letter, new letter, and Down letter (in that order) form a particular word appropriate to the title. Also, if you look at the conflicted squares in the grid, you will see what letter to insert into the bolthole in the center of the grid to form two other relevant sets.
